

Test Plan

Test Plan: Test plan is detailed document that describe test strategy, objective schedules, estimation and resources required o perform testing for a software product.

How to write a test plan:

- **Analyze the product:** It is not possible to test a product without having any information about it. You need to have a proper understanding of user requirement and expectation.
- **Develop test strategy:** Test strategy can be composed of several testing techniques. Keeping the user requirement in mind you should decide on technique to use.
- **Define objective:** Objective is to release high quality bug free software to market on time.
- **Resource planning:** It is basically a detailed summery of all resources required to complete the project.
- **Develop a schedule:** To create a schedule for testing
- **Determine test deliverables:** It is the list of all document, tools that have to developed and maintained in testing efforts.
